GTconsult is looking for a Technical Manager for their Cape Town office. The individual should be excited about new SharePoint, O365 and Azure concepts, able to chat to both business and end developers and not afraid to get their hands dirty all the while bringing fresh creative ideas to the table.

JOB SUMMARY

Your technical expertise will help guide the delivery team across multi regions to achieve excellence. Using your solution design experience and technical knowledge empowers you to mentor the delivery team during the project delivery process and during technical support issues.

KEY RESPONSIBILITIES AND ACCOUNTABILITIES:

- Responsible for ensuring that client expectations and deliverables are met on time and in high quality
- Assist in day to day architecting and solution design
- Act as a technical lead for regional projects and resolve technical issues that may arise during project execution
- Consult with clients to determine Functional and Technical requirements and specifications
- Compile Functional Specifications for all projects within region and ensure that these are discussed with the delivery team prior to development phase of the project
- Compile Technical Specifications for internal use where need or required
- Assist development team in daily tasks and act as the final escalation point for project issues and support tickets within region
- Provide insight to the Managing Director of day to day operations and technical risks
- Be proficient in building workflows using Microsoft Flow, Nintex, and SharePoint Designer.
- Be proficient in building custom forms, using Microsoft PowerApps, InfoPath, Nintex Forms, REST API, or custom HTML with lightweight jQuery if needed.

- Lead a team of developers to ensure that project tasks are in time and that support issues are dealt with in a timely manner
- Build front-end SharePoint solutions using the latest HTML, CSS, and JavaScript frameworks
- Be proficient in configuring SharePoint using OOTB functionality
- Be proficient in using industry leading SharePoint migration software
- Be proficient in building SharePoint page layouts, search configuration, custom web parts, master pages, etc.
- Understand the limitations and best practices of customizing SharePoint
- Be familiar with the limitations of SharePoint Online and SharePoint On-Premise
- Always attend daily standup meetings and raise project issues and concerns with Project Manager
- Assist with client support queries and provide professional feedback to clients when dealing with support requests
- Ensure that daily timesheets are captured
- Complete the necessary training assigned by Manager within the agreed timelines
- Compile client proposals and adhere to the company proposal templates
- Provide professional consulting services and showcase new technology and solutions to clients.
- In the event of absence ensure that support and project handovers are done in full
