

Content Matrix

THE MOST POWERFUL WAY TO MIGRATE, UPGRADE, AND ORGANIZE YOUR SHAREPOINT CONTENT

Content Matrix 6 is the evolution of the award-winning Migration Manager for SharePoint. It provides one-hop, high-speed and high-fidelity migration of content from any previous version of SharePoint up to 25 times faster than other 3rd party migration vendors. Users can identify existing content, build out a new site structure and move content when, where and how they prefer.

KEY FEATURES

Direct SharePoint Migration

Instantly take advantage of new SharePoint 2013 or Office 365 functionality by directly migrating from any previous version of SharePoint. Microsoft's SharePoint upgrade tools have basic support for upgrading from SharePoint 2010 and do not support migrating from SharePoint 2003 and 2007. Content Matrix 6 is a SharePoint migration tool that removes this limitation and provides comprehensive support for SharePoint migrations to 2013 or Office 365 – from SharePoint 2003, 2007 or 2010.

Migrate File Shares and more

Rapidly migrate all business content into SharePoint without losing context and metadata. Content Matrix 6 connects and moves terabytes of content from file shares, websites, blogs & wikis, Exchange Public Folders, PST files and eRoom content. Content Matrix 6 migrates the content, files, associated metadata and other relevant attributes such as permissions or information structure into SharePoint.

KEY BENEFITS

► Migrate SharePoint with Confidence

A SharePoint migration is a complex and daunting process. With Content Matrix 6, you go beyond the basic Microsoft upgrade tools, and get the power, speed and flexibility you need to carry out your SharePoint upgrade with confidence. Identify what content you currently have, build out a new site structure and move your content when, where and how you want. Content Matrix 6 is the evolution of Metalogix Migration Manager – the most experienced and widely used SharePoint migration technology since 2001.

► Move to the Cloud: Office 365 and Office 365 Dedicated

Ready to migrate to SharePoint in the Cloud? Content Matrix 6 is a single product for migrating to both the Cloud or SharePoint on-premises. It is the easiest and most reliable way to move some or all of your content to Office 365 or Office 365 Dedicated. In fact, it has been selected by Microsoft as the only pre-approved SharePoint migration solution for migrating to Office 365 Dedicated. Simply connect Content Matrix 6 to your Office 365 environment and move content in either direction between on-premises or the Cloud.

► Keep SharePoint Organized

Current sites and lists break sizing guidelines. Projects change, departments are reorganized and business needs evolve. Both your current and future site structure and information architecture can unravel and cause user confusion and errors. Keep SharePoint site structures in sync with business needs by using the powerful new Organizer feature of Content Matrix 6. Easily split or merge sites and site collections or reorganize the structure of your farm.

Manage SharePoint & Empower Content Owners

Why make IT the bottleneck for keeping SharePoint organized? Content Matrix 6 allows SharePoint Administrators to optionally empower users to organize and manage their sites and content directly from within the SharePoint user interface. Site collection owners can reorganize their sites and lists structures. Users with appropriate permissions and rights can easily move, bulk upload, tag and classify their content within your SharePoint farm.

Speed Matters

Content Matrix 6 maximizes the speed of your SharePoint migration. It boasts the leading performance in the industry and when used in conjunction with Metalogix StoragePoint it is possible to achieve migrations speeds of up to 125GB per hour. Migration operations can be split into multiple jobs that run simultaneously, resulting in a high speed SharePoint migration. You can use the incremental migration feature to skip settings and content that has already been migrated to further increase the speed of your SharePoint migration project.

Move Structure, Workflows and Permissions

Content Matrix 6 moves the content as well as the site structure and permissions that support the content. It moves workflows that use the content including SharePoint, SharePoint Designer or Nintex workflows. It even allows applying new SharePoint templates to your structure as part of the migration process.

Prepare your existing content

Look before you leap. Identify what content you already have in the source system and how it should be moved to the target system. Content Matrix 6 pre-migration features include the ability to reorganize sites and content and apply metadata and content types to your existing SharePoint content to smooth the migration process. Many features can optionally be made available to site owners and end users to ensure that only relevant content is migrated.
