Metalogix

Replicator

PROVIDE FAST LOCAL ACCESS TO SHAREPOINT FOR YOUR DISTRIBUTED USER BASE

Metalogix Replicator for SharePoint synchronizes SharePoint content for geographically distributed users. Replicator gets the right content to different locations, and makes SharePoint content highly available, even over poor network connections. Bring your SharePoint content – documents, sites, applications, permissions, workflows – closer to your users to avoid delays, boost performance, and increase SharePoint adoption. Use Replicator for uptime during power, system, or network failures and planned outages such as software or hardware refreshes.

KEY BENEFITS

▶ **Improve User Productivity and Satisfaction in Remote Locations**
Get targeted content to remote users in real time to make them more productive and use only the bandwidth required. Ensure SharePoint users in remote locations experience the same speed and performance as those at headquarters.

▶ **Eliminate Risks of Out of Sync Content**
Connect and synchronize two or more distant SharePoint farms in real time so your SharePoint content is always available and up to date. Your SharePoint content – documents, sites, applications, permissions, workflows – gets closer to your users to avoid delays, boost performance, and increase SharePoint adoption.

▶ **Replicate to the Cloud for Flexibility**
Want to use the Cloud to improve high availability or remote access? Replicate all or some of your content to Azure, Amazon or other cloud providers. Replicator's fast synchronization and low bandwidth requirements make it the ideal solution to extend content to the Cloud.

▶ **Extend SharePoint to Partners and Customers**
Share documents via an Extranet with partners and customers by setting up a server outside your firewall and synchronizing select content with headquarters. Replicator works through firewalls and ensures security when extending your business to external business partners.

▶ **Install and use Within SharePoint**
Replicator installs into an existing farm allowing you to manage replication from the same place you manage SharePoint. There is no additional hardware needed, and no need to manage separate user name and passwords.

KEY FEATURES

Sync Between any Combination of SharePoint 2007, 2010, and 2013

Synchronize content to distant farms running on the same or different versions of SharePoint. Keep SharePoint in sync, especially during a migration, a merger or acquisition, or when sharing content with an organization outside of your network.

Control What is Replicated

Get the right content to different divisions or locations. Keep your master content database at headquarters and choose how much or how little to share with remote SharePoint farms. Pick any level of granularity from entire web applications to specific list items. Get targeted content to remote users in real time to make them more productive and use minimal bandwidth.

Make Content Highly Available

Outages happen. Yet your content must be "always on" for customers, partners and employees. Setup a safety net by replicating content across multiple SharePoint farms. Give users continuous access to SharePoint even if any part of your environment fails. Use Replicator for uptime during power, system or network failures and planned outages.

SUPPORTED SYSTEMS

Replicator easily installs into SharePoint Central Administration and is a native Microsoft .NET application. Does not require external client software, caching or non-native backup and restore solutions.

Operating System:

Windows Server 2012

Windows Server 2008 R2

Windows Server 2008

Windows Server 2003 SP1

SharePoint:

Microsoft SharePoint Server 2013

Microsoft SharePoint Foundation 2013

Microsoft SharePoint Server 2010

Microsoft SharePoint Foundation 2010

Windows SharePoint Services 3.0

Microsoft Office SharePoint Server 2007

Databases:

SQL Server 2012

SQL Server 2008 R2

SQL Server 2008

SQL Server 2005

ABOUT METALOGIX

Metalogix provides content infrastructure software to improve the use and performance of enterprise content. For over a decade, Metalogix has transformed the way commercial and government organizations manage terabytes of content to improve knowledge sharing and collaboration.

Today, more than 14,000 customers rely on the company's products to upgrade, migrate, organize, store, archive and replicate content on Microsoft SharePoint, Exchange and Cloud platforms. Metalogix is a privately held company backed by Insight Venture Partners and Bessemer Venture Partners.

Replicate Live In-Process Workflows, Updated Anywhere

Users can follow business processes using SharePoint workflows from their local office. Request an approval in New York and have your manager in London accept the changes. Attach out of the box, SharePoint Designer, Visual Studio, or Nintex workflows to a list.

Sync Real-Time Across Multiple SharePoint Farms

Replicator finds the most efficient path across your network when syncing content across multiple farms. Content follows users as they go through their workday regardless of where they are located. Replicator scales as your organization grows, ensuring that content is in-sync with your users.

Sync Despite Poor Connections

Synchronizing SharePoint farms in remote offices or offshore locations can be tricky. Spotty network bandwidth and slow connections pose huge hurdles. Replicator overcomes these hurdles by automatically adapting to changing network conditions and rerouting content where it needs to go.

Prioritize Sync Based on Rules

Rank what replicates first, because your financial data is more important than company party pictures. Classify and prioritize content based on important site collections, list items or metadata such as document type, file size, or file name.
